Introduction

The purpose of the Miller Word-Identification Assessment (MWIA) is to discover how a person “looks at” printed words, or the extent to which he/she is reading with the whole-word memorization or a phonetic decoding strategy.

The person is asked to read two lists (called “Holistic” and “Phonetic”) of words which, though different, are all easy enough that a Phonetic-decoding reader will exhibit substantially equal fluency in both lists. However, for the whole-word trained reader one list (the Holistic list) will be significantly easier, it being composed of high-frequency words found in most basal-reader school texts and in children’s books such as The Cat in the Hat and Green Eggs and Ham. The drop in fluency and accuracy as the person proceeds from the Holistic List to the Phonetic list indicates the degree to which he/she has become “dyslexic,” that is, having dysfunctional reading, by having learned to view words as whole pictorial configurations rather than sound-decodable syllables where sequences of letters represent the order of sounds to be pronounced. The latter process is, of course, what has historically been called “sounding-out”, or “decoding,” by alphabetic principles often called “phonics.”

CAUTION: Although this test may lead to a student’s being judged “dyslexic,” it is NOT an intelligence test, NOT a psychological test, NOT a medical test. It is an educational test yielding insight as to how a student has learned to “look at” words in print. Since the Holistic list contains 15 multi-syllable words and 18 having irregularities and/or “silent” letters, and the Phonetic list contains only one-syllable alphabetically-regular words, differences in fluency/accuracy are NOT explainable via biological factors, and must therefore be learned behaviors.

By way of background, psychiatrist Hilda Mosse (The Complete Handbook of Children’s Reading Disorders, Riggs Institute) identified a category of “sociogenic reading disorders .. caused by .. establishment and practice of wrong reflexes.” She pointed out that a “conditioned reflex” emplaced in the brain by whatever is learned first as a reading strategy is highly resistant to change thereafter. Similarly, teacher-researcher Geraldine Rodgers (The Case for the Prosecution, 1981) identifies two categories of readers, “subjective” and “objective,” confirming Oskar Messmer’s 1903 research, described by Edmund Burke Huey in his 1908 The Psychology and Pedagogy of Reading. The “subjective” readers are the holistic readers who guess unfamiliar words from context and/or parts of meaning-bearing words, and have difficulty with the new material. By contrast, “objective” readers are those who have learned syllable decoding to automaticity, leaving their intellects free to concentrate on the text meaning. Thus it has been known for many years that phonics skills learned AFTER a whole-word reflex has been acquired tend NOT to be used automatically. Rodgers found similar patterns of differences in students learning to read in four other languages other than English. I observed this effect in my own practice during the 1970’s, but did not understand its nature.

1The Hidden Story, AuthorHouse.com, 1998
**Test Description**

The MWIA has two levels, each being a pair of lists: Holistic I & Phonetic I; Holistic II & Phonetic II, all contained on four pages (attached), identical for both student and teacher/examiner. The first page contains the Level I Holistic and Phonetic lists; the second page a 150-word article titled “Vote;” the third and fourth pages contain respectively the Holistic II and Phonetic II lists. A fifth page is an optional Summary Sheet for recording student data and all test scores and analyses. The level I is for young or relatively beginner-level readers. The **Holistic Level I** list has 50 words from Dr. Seuss’ *Greek Eggs and Ham*, a book composed of sight-words supplied by an educational publisher. The **Phonetic Level I** list is 50 phonetically regular words of one syllable taken from the first 16 Exercises in Rudolf Flesch’s 1955 *Why Johnny Can’t Read and what you can do about it*. **Holistic Level II** list contains the 210 words in Dr. Seuss’ *The Cat in the Hat*. **The Phonetic Level II** list words are from the first 38 Exercises in *Why Johnny Can’t Read*.

**Procedure**

A. Decide whether you will start at Level I or Level II, based upon your judgment of the student. Young or low-level students might be able to do only Level I; secondary or adult students usually start at Level II. Prepare a teacher’s copy of the test by writing the student’s name in the spaces of the sheet you will be using. The student will be timed as he reads each list, so you will need a stopwatch or equivalent timing device. The student works from an unmarked copy of the test; it may be useful to set aside copies in (non-glare) plastic page protectors. Arrange the student comfortably seated at a desk or table with a copy of the test face down or with the first row covered. Arrange yourself where the student cannot see if, how, or when you are marking your copy. (If you are recording the test, arrange a microphone in as non-threatening a position as possible, preferably a small clip-on lavaliere microphone clipped to the front of the student’s clothing.) To help the student keep his place, provide a short ruler or file card as a line guide if he seems to need it; or let him use his finger or place a light pencil mark at the beginning of each row as he starts it.

B. Say to the student: “We are going to ask you to read words from two lists. You probably know some of them already. Read all the words across in each row, then the next, and so on. Say each word carefully as you can; accuracy is the most important thing, so do not hurry even though I will be timing you. This is NOT a speed test; we just need to see how long it takes you to read the words.” If he has questions, answer them as best you can; then say, “Please turn over the paper and begin.” [Point wherever you are starting.]

C. Point as needed to where the student should begin. Help him align his line guide if necessary. Start your timer as the student says the first word. Listen carefully (if not taping), and underline on the teacher’s copy each word that the student mis-calls or double-calls. (Notice if his “double-calls” are first holistic, or the reverse.) Stop your timer when he says the last word in the Holistic section. Enter the timer reading in minutes and second by the word “TIME.” Reset your timer. (Writing the student’s responses over the misread words can reveal valuable insights into the student’s word processing strategies – suggested by Donald Potter of Odessa, TX.)

D. Repeat C for the Phonetic List. After doing the Phonetic list, in the phonetic section only, revisiting the words (at least 5 – 10 if not all) that were missed/underlined, point to each in turn, and ask the student to:
1. Spell the word aloud while looking at it, and then,
2. Say the word again.

If he now calls the word correctly, draw a circle around it in your copy. If he still mis-
pronounces the word, put /slashes/.

E. If the student took more than 100 seconds on both level I lists, go no further. If he had read
either list in less than 100 seconds, proceed with level II, using the same procedures as above.

F. After giving the Phonetic II section, have the student spell and retry missed words as in D,
above. Note: For a young student or one who struggled with Level II lists, it may be too much to
re-try all the missed words. Revisit only enough to support the computing of a sensible
correction basis, say 5 – 10. Record the number revisited in the second blank space after “Spell-
corrected.” Make the “Phonic Efficiency” computation as the number corrected divided by the
number revisited, converted to a percentage.

G. If the student read the Phonetic II list well, have him read the “Vote” article. Underline the
mis-called or skipped words, and if possible indicate any substitutions or additions. Record time
and errors where indicated.

H. Tell the student he did great things even if he only followed directions!

**Scoring**

Count the underlined words (including circled) words in each section; write the count on the line
“Err.” Convert the “times” from minutes & seconds to total seconds. Convert total seconds to
word-per-minute (WPM), calculating per the formula below:

For Level I (50-word) test, compute WPM by dividing total seconds into 3000: \[ WPM = \frac{(50 \times 60)}{(\text{TIME in SECONDS})} = \frac{3000}{\text{TIME}}; \] e.g., for a time of 150 seconds, the speed would be
3000 divided by 150 or **20** WPM. (Round to the nearest whole number.)

For Level II (210 word) sections, WPM is \[ WPM = \frac{(210 \times 60)}{(\text{TIME in seconds})} = \frac{12600}{\text{TIME}}; \] e.g., for a time of 200 seconds, the speed would be
12600 divided by 200 or **63** WPM.

For the “VOTE” articles, WPM is 9000 divided by Total Seconds.

For the Phonetic Sections, count the words that are *circled* and enter the count in the space after
“Spell-Corrected.” Divide this count by number of words underlined, revisited per the NOTE in
Part F, above. Express the results as a percentage, i.e., multiply by 100. This is the “Phonic
Efficiency” indicator, the student’s ability to decode words phonetically once his attention has
been directed to the spelling.

Compute “percent of slow-downs” as: 100 X (Holistic WPM – Phonetic WPM)/Holistic WPM,
and record in the space indicated. In Level II, it is convenient to transcribe the Holistic scores on
to the Phonetic page where indicated, so as to have all data on one page.
Interpretation/Discussion

If the student reads at 30 WPM or more (50 words in 100 seconds or less; or 210 words in 420 seconds or less), he is using an “automatic” system, whatever it is.

Observe the percent slow-down between the corresponding Holistic and Phonetic lists. If the student has first learned a non-phonetic word identification system as a principal strategy, he may be “running on automatic” in the Holistic list, but unable to do so, and significantly (15% or more) slower in the Phonetic list. (Students have been found who slow down more than 50%.)

Compare the numbers of errors between corresponding Holistic and Phonetic lists. If the student is a whole-word reader, his accuracy will suffer on the Phonetic lists. Students whose strategy is holistic have been known to make over 10 times as many errors on the Phonetic as on the Holistic list. Look at the pattern of “double-called” words. The student with the non-phonetic or holistic strategy calls the word non-phonetically first, never the other way around.

The spell-and-re-try steps, note that where the student correctly calls certain words only after his attention is directed to their spelling, this indicates the existence of TWO knowledge systems relevant to identification of words. The two knowledge systems are mutually exclusive, and the student cannot deny either one by conscious effort. This is a condition known to psychologist as “cognitive dissonances,” which has been known to lead to emotional disturbance and trauma.

The holistic, or shape-recognition, a way of perceiving visual stimuli relies mainly on the RIGHT brain hemisphere for processing as simultaneous or “parallel” data. Conversely, the phonetic way of decoding letters and syllables is in serial order uses mainly the LEFT brain hemisphere, which is a “serial processor,” and which has been found generally to be more involved in language activities – appropriately, as language is inherently serial data.

Also, since the two eyes map mirror-symmetrical images in the two brain hemispheres, an instructional emphasis on “right-brain reading” may account for the increased tendency for reversals and transpositions among non-phonetically-taught students.

If the student’s total accuracy is 96% (a total of less than 10 errors) in the combined Phonetic sections, his automatic system is phonetically based and will guard him against becoming educationally dyslexic. Such a student will read both kinds of word lists at substantially the same speed, and the newspaper articles in two minutes or less with no substantive errors.

A student who reads ONLY the Holistic list well is a “disabled” or “dyslexic” reader, and will need intensive re-training to re-condition his automatic reflex. Success is uncertain unless the student is highly motivated. Obviously, the earlier the intervention, the more favorable the prognosis.

The acquired-dyslexic condition has been found to be language-specific; that is, an English-dyslexic reader can acquire a phonetic-based reflex in a second (or additional language) as long as efforts are made to get the student to look at the words analytically instead of holistically. Perhaps the most important results of this test is that we may better understand the problems associated with learning to read, and begin to examine reading programs in terms of the reading reflexes they produce in their students,

Educational Engineering, Charles M. Richardson, September 27, 1995. Retyped on 4/19/03 by Donald Potter for publication on the Education Page of the www.donpotter.net website. Thanks to Geraldine Rodgers for sending corrections on 9/2/03. Published on the web 7/22/04. Further updates and corrections were made on 2/11/2016.

Vote I

One last time: vote

Please vote for the people who are going to run the school. Go and vote.

If today is Tuesday and you have not voted, please go vote now.

This vote is important. It is not important because the people running for office send you lots of material to get your vote. It is not important because there are a lot of people running for office. It is not important because they are spending a lot of money to get the job. It is important because you need to make sure that the best people get elected. You want good people over the schools. Your job as a voter is to vote.

It is bad when people do not vote. It is your job to make sure that good people run the schools. We do not want bad people running the schools. Please help us now. Please.

(150 words, 14 sentences, 10.4 words per sentence, 3.9 characters per word, Flesch-Kincaid Grade Level 4.2) Written by Donald Potter 5/12/03.
One last time: vote.

The board of education election and the party primary election is tomorrow. Make sure you vote.

For some readers of this newspaper, it may already be Tuesday when you find time to read this far. If any registered voter reading this hasn’t voted, drop everything and go to the polls.

This election is an important one. Not because of the volume of promotional material, or the number of candidates, or the amount of money spent, but because of the solemn responsibility voters bear to select the best people available to carry out serious duties of government.

It is perhaps the most vital component of our national heritage, the democratic challenge to elect our government. What a shame it is when governing bodies are chosen by a minority of the voters. Make sure this election is a valid reflection of public will. Do your part. Go vote.
